

The colour of TERMONIUM AND TERMONIUM PLUS EPS foam boards

The EPS foam boards of the latest generation – TERMONIUM fasada (facade), TERMONIUM PLUS fasada (facade) and TERMONIUM dach-podłoga (roof-floor) are produced by Termo Organika from special raw material thanks to which the boards feature very low, that is to say, beneficial thermal conductivity (λ value). The boards contain polystyrene supplements; therefore, they stand out from traditional white EPS foam boards. Their typical and observed with the naked eye is the colour. Depending on the applied raw material, it can be grey, silver grey, graphite or almost black. The colour as well as the level of its saturation may vary between different kinds of EPS boards but also within one kind. However, this does not influence the performance of boards, both thermal, and physical and mechanical.
